FORGE PH

STARTUP INVESTMENT COMPOUND

An event built like a startup.

FORGE tests whether new cross-border configurations can make startups more investable and capital more deployable.

INNOVATORS | CAPABILITIES | CONFIGURATIONS | SMART CAPITAL

29 OCTOBER 2026 • DUSIT THANI MANILA, MAKATI

The thesis

FORGE does not just improve startups. It tests the configuration that can make them investable.

Core idea

Accelerators improve startups. Venture studios build startups. VCs fund startups. FORGE would design, finance and test the temporary configuration that changes the risk.

01

Startup remains the venture, but the configuration becomes the unit of intervention.

02

Capital is sequenced to fund the change that changes the risk.

03

The 90-day cycle measures whether investability actually improves.

04

The corridor brings international capabilities into local and ASEAN opportunities.

The problem is not visibility.

It is the gap between opportunity and investability.

FOUNDERS ARE VISIBLE

But investors still need clearer evidence, governance, capital sequence and execution conditions.

INVESTORS SEE RISK

But not always the path, cost or capability needed to reduce it.

CAPABILITIES EXIST

But remain outside the deal or outside the country when the startup needs them most.

EVENTS STOP EARLY

They create contacts, not enough owned next steps and measurable continuation.

The problem in one line

The ecosystem does not lack people, ideas or capital. It lacks a repeatable way to configure them, de-risk the opportunity and convert signals into owned next steps.

FORGE changes the unit of value.

From “the startup alone” to the temporary configuration around the startup.

The FORGE answer

Do not fund the whole risk. Fund what changes the risk.

This makes the configuration — not the conference table — the object to design, finance and measure.

A 90-day investment compound.

The public event is the MVP. The post-event compound is the validation cycle.

FORGE PH

Brand and platform for cross-border venture configuration.

FORGE DAY

The physical front-end: risk intelligence, showcases, tables and deal rooms.

FORGE NEXT

90-day post-event compound: measure, reconfigure or stop.

Product hypothesis

A venture can become more investable when the right people, capabilities, evidence and capital sequence enter the configuration at the right time.

How FORGE works

Recruit potential. Configure capability. Improve readiness. Test what deserves to continue.

RECRUIT
Founders, startups, university teams and credible pre-company ideas.

→

PROFILE
Problem, evidence, team, need, capability, capital.

→

QUALIFY
Substance, clarity and actionability — not endorsement.

→

CONFIGURE
Temporary cells around actual needs and missing capabilities.

→

DE-RISK
Make gaps and investor conditions legible.

→

CONVERT
Diligence, pilot, partnership, capital sequence or stop.

Working Cell rule

Need + complementary capability + willingness + possible action. Anything less is only conversation.

The corridor is not a backdrop.

It is part of the product.

FORGE imports capability, not merely services.

The objective is not outsourcing. It is to build temporary cross-border configurations that leave stronger local execution capacity behind.

FORGE can monetize before it becomes a fund.

The venture path can evolve in layers, without pretending the first cycle is already a regulated investment product.

LAYER 1: EVENT REVENUE

Sponsorship, memberships, curated participation, visibility and institutional partnerships.

LAYER 2: CONFIGURATION SERVICES

Paid readiness work, capability mapping, partner search and structured follow-up.

LAYER 3: SUCCESS ECONOMICS

Success fee, advisory fee, warrants or upside-linked participation where allowed.

LAYER 4: CAPITAL VEHICLE

Future pilot pool or SPVs to fund risk-changing actions, subject to governance and regulation.

Capital logic

Investors would not only fund a startup pipeline. They would fund FORGE's capacity to make selected opportunities more investable.

The real moat is not a list of startups.

It is a dataset on how investability changes.

CONFIGURATION SCORE

Is the temporary society complete enough to act?

DE-RISK SCORE

Which risks were reduced by capability, evidence or governance?

READINESS SCORE

Is the venture ready for the next capital step?

COMPOUND EFFECT

Did the configuration create value greater than its parts?

Configuration intelligence

After multiple cycles, FORGE can learn which combinations of capability, evidence, market access and capital most often change investor conditions.

The MVP is measurable.

FORGE Day creates the first configurations. The 90 days test whether they change anything.

D+0 — FORGE PAPER T1

configuration, evidence, conditions, next action

D+10 — ACTIVATION

did the pilot, diligence or financing step begin?

D+45 — EVIDENCE

what proof, capability or access changed?

D+90 — REASSESSMENT

continue, reconfigure, seek capital or stop

Validation question

Can a deliberately designed and financed configuration change the investability of a startup?

What FORGE needs now

Not just speakers. Participants must enter with a role, capability or capital condition.

- 10–15 qualified startups/projects with clear needs and evidence.
- Investors willing to disclose decision criteria and risk filters.
- Corporate/capability partners able to enter temporary configurations.
- A risk intelligence partner for readiness and de-risking logic.
- A small pilot pool or sponsored capability budget after the event.

The ask

Support the first FORGE cycle as a launch partner, capital partner, capability partner or pipeline partner.

FORGE PH

STARTUP INVESTMENT COMPOUND

An event built like a startup.

Configure capability. Change the risk. Convert into investment.
